

How is your organization monitoring and responding to emerging threats and incidents, especially large protests or civil unrest?

Safeture and Exlog Global have joined forces to provide business leaders situational awareness and alerting of events that may pose a threat to your facilities and personnel – even if they are now working remotely.

SAFETURE Facility Risk Management Platform

Safeture provides an enhanced tool to communicate critical information to all personnel. By plotting Facility locations within the Safeture Portal you can be notified automatically of any incident within the defined impact radius of your facilities.

The screenshot displays the 'Facilities' management interface. On the left, a sidebar contains navigation icons. The main content area is titled 'Facilities' and includes a breadcrumb 'Home / Details' and a user profile 'Adam Warren'. Below this, there are tabs for 'Details', 'Contacts', and 'Alerts'. The 'Details' tab is active, showing 'Facility details' for 'Corporate Office Nashville'. The details include:

- Name: Corporate Office Nashville
- Address: Dr DB Tdd Jr Blvd
- State: [Redacted]
- Country: United States
- Phone number: 165487524587
- Description: [Redacted]
- Incident Detection (km): 2
- Latitude: 36.164394128187
- Longitude: -86.80318066419505
- Tags: CORPORATE, HR, SALES
- Management: A table listing personnel with columns for Name, Email, and Phone number.

On the right side of the interface, a map of Nashville, Tennessee, is shown. The map features several overlapping circular impact radius zones around the city center, representing the detection range for different facilities. A red circle is the largest, followed by a blue circle, and a smaller purple circle. Landmarks like the Tennessee State Capitol and various parks are visible on the map.
